Answer ALL questions in this section.

QUESTION 1 (20 marks)

(a) The following hypotheses are to be tested at significance level of 0.05 (i.e. $\alpha = 0.05$). A random sample of 400 observations shows the sample proportion $p = 0.40$.

$H_0 : \pi = 0.30$

$H_1 : \pi \neq 0.30$

Where π is the population proportion.

(i) Find the value of test statistic.

(3 marks)

(ii) Find the critical statistic from standard normal table.

(2 marks)

(b) With the recently introduced new processing method, a project manager claims that the mean project completion time can be shorten. The mean completion time used to be 20 days. A sample of 60 recently completed projects gives sample mean time of 19.5 days with standard deviation of 0.9 day.

(i) State the null and alternative hypotheses.

(2 marks)

(ii) Find the value of test statistic.

(3 marks)

(c) An experienced lecturer claims that he managed to improve the mean exam mark of the students, with the hypotheses as below:

$H_0 : \mu = 55$

$H_1 : \mu > 55$

The exam mark follows normal distribution. In order to confirm whether his claim is acceptable, a random sample of 10 students' recent exam marks was obtained. The sample mean exam mark was 59 marks, and the sample standard deviation was 5 marks. Use $\alpha = 0.05$, perform an appropriate hypothesis test to determine whether his claim is acceptable, as below:

(i) find the critical statistics.

(2 marks)

(ii) calculate the test statistics.

(3 marks)

(iii) state the decision rule.

(1 mark)

(iv) state the conclusion of the hypothesis test.

(2 marks)

(v) For this question, you have used a certain hypothesis test, give your justification why it was chosen.

(2 marks)

QUESTION 2 (20 marks)

(a) ABC Capital is considering investing $15 million in two different projects, **Housing** and **Manufacturing**. The return on housing is dependent on the state of the economy as shown below:

Housing	State of Economy		
	Good	Average	Poor
Profit	25%	20%	-15%

The probability of each state of economy is 0.1, 0.6 and 0.3 respectively. **Manufacturing**'s profit is fixed at 15% of investment, regardless of the state of the economy.

(i) Draw a decision tree to represent the alternative courses of action and show each of the payoffs.

(12 marks)

(ii) Determine the best project for ABC Capital using expected value approach.

(4 marks)

(b) A big corporation has short-listed three possible industries for investment purposes. The following shows the projected payoff (profit in $ million) according to the decision alternatives and state of nature.

Payoff ($ million) table

Decision Alternative	State of Nature		
	S_1	**S_2**	**S_3**
Industry A	5.5	4.2	-1.4
Industry B	4.0	2.8	-1.1
Industry C	2.8	2.5	1.8

By using the equal likelihood approach, determine which industry is the best to invest in.

4 marks)

QUESTION 3 (30 marks)

(a) A study was carried out to investigate the relationship between gender and course selection of students. The data collected were as shown in the contingency table below:

Gender	Course selection			
	Management	Law	Economics	Science
Female	50	40	20	10
Male	30	10	25	15

Conduct an appropriate hypothesis test to confirm whether the course selection is independent of gender. Use $\alpha = 0.01$ in your hypothesis testing.

(14 marks)

(b) The exam mark of PSMOD used to follow normal distribution, and the head of school claims that its real mean mark is 60. In order to ascertain whether the head's claim is acceptable, the exam department obtains a sample of 5 students' marks as below:

58, 65, 70, 75, 62

Conduct an appropriate hypothesis test to confirm whether the head's claim is acceptable. Use significance level of 0.05.

(16 marks)

QUESTION 4 (30 marks)

An economist wants to evaluate the feasibility of three development options. The following payoff table shows the profit ($mil) of each development option under various future economic environments:

Payoff (profit) table

Development option	Economic environment		
	Good	**Fair**	**Poor**
Construction	200	150	-30
Plantation	150	50	20
Mining	120	100	-40

According to expert's predictions the probability of economic environments are as below:
0.20 for **good** economic environment, 0.50 for **fair** economic environment, and 0.30 for **poor** economic environment.

Answer all the questions below by showing your workings where necessary.

(a) Determine the best development option using the following decision approach.

(i) Maximin

(2 marks)

(ii) Maximax

(2 marks)

(iii) Briefly describe the personality of:
(A) a decision maker who prefers Maximin approach.
(B) a decision maker who prefers Maximax approach.

(4 marks)

(iv) Hurwicz: when coefficient of optimism $\alpha = 0.9$

(3 marks)

(v) Without further calculation, what would will be the best development option for case $\alpha = 0$.

(2 marks)

(b) (i) By using the payoff table above, construct an opportunity loss (regret) table.

(4 marks)

(ii) Determine the best development option by using Minimax regret approach.

(3 marks)

(iii) Determine the best development option by using Expected Opportunity Loss approach.

(3 marks)

(c) By using the best expected value approach, find the development option which will give the best expected profits?

(3 marks)

(d) Without further calculation, write down the expected value of perfect information (EVPI)? Interpret the meaning of EVPI.

(4 marks)

FORMULAE AND TABLES

(a) Binomial Distribution

$$P(X = x) = {}^{n}C_{x}(p)^{x}(1-p)^{n-x}$$

Where

p is the probability of success in single trial
n is the number of trials

Mean of a Binomial distribution, $E(X) = np$

Standard deviation of a Binomial distribution, $\sigma = \sqrt{np(1-p)}$

(b) Poisson Distribution

$$P(X = x) = \frac{e^{-\lambda}\lambda^{x}}{x!}, x = 0,1,...$$

λ represents the mean

Mean of a Poisson distribution, $E(X) = \lambda$

Standard deviation of a Poisson distribution, $\sigma = \sqrt{\lambda}$

(c) Normal Distribution

$$Z = \frac{X - \mu}{\sigma}$$

Where

Z is the number of standard deviation from the mean
X is the value of interest

Mean of a Normal distribution, $E(X) = \mu$

Standard deviation of a Normal distribution, sd(X) = σ

(d) Sampling Distribution

(i) Standard error of mean

$$se(\overline{X}) = \frac{\sigma}{\sqrt{n}}$$

Where

σ is the standard deviation for the population
n represent the sample size

OR

$$se(\overline{X}) = \frac{s}{\sqrt{n}}$$

Where

s is the standard deviation for the sample
n represent the sample size

(ii) Standard error of proportion

$$se(\hat{p}) = \sqrt{\frac{\hat{p}(1-\hat{p})}{n}}$$

(e) Confidence Interval

(i) Confidence interval for μ: = $\overline{X} \pm Z\left(\frac{\sigma}{\sqrt{n}}\right)$

Confidence interval for μ: = $\overline{X} \pm Z\left(\frac{\sigma}{\sqrt{n}} \times \sqrt{\frac{N-n}{N-1}}\right)$

Confidence interval for μ: = $\overline{X} \pm t_{\frac{\alpha}{2}, n-1}\left(\frac{s}{\sqrt{n}}\right)$

Sample size: $n = \left(\frac{Z_{\alpha/2} \times \sigma}{e}\right)^2$

(ii) Confidence interval for π : $\pi = p \pm Z\left(\sqrt{\frac{p(1-p)}{n}}\right)$

Sample size, $n = \frac{(Z_{\alpha/2})^2 \times p(1-p)}{e^2}$

(f) Hypothesis Testing:

(i) Hypothesis testing for μ: t = $\frac{\overline{X} - \mu}{s/\sqrt{n}}$

(ii) Hypothesis testing for π: Z = $\frac{p - \pi}{\sqrt{\frac{\pi(1-\pi)}{n}}}$

(iii) Non-parametric testing: $\chi^2 = \sum \frac{(O-E)^2}{E}$

(g) Decision Making Techniques

(i) Expected Value:

$$EV(i) = \sum_{j=1}^{N} P_j X_{ij}$$

(ii) Expected Opportunity Loss:

$$EOL(i) = \sum_{j=1}^{N} P_j L_{ij}$$

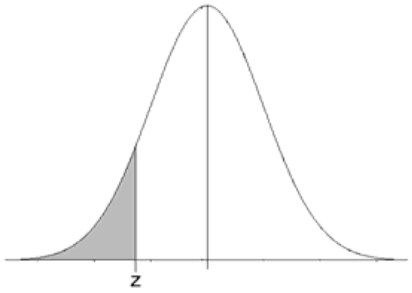
(iii) Expected Value of Perfect Information:

$EVPI$ = Expected value under certainty – expected value under uncertainty

(h) Standard Deviation, $\sigma = \sqrt{\frac{\sum x^2}{N} - \left(\frac{\sum x}{N}\right)^2}$ or $s = \sqrt{\frac{\sum x^2}{n-1} - \frac{\left(\sum x\right)^2}{n(n-1)}}$

STANDARD NORMAL CUMULATIVE PROBABILITY TABLE

Cumulative probabilities for NEGATIVE z-values are shown in the following table:



z	0.00	0.01	0.02	0.03	0.04	0.05	0.06	0.07	0.08	0.09
